

BEARING DESIGNATION SYSTEMS

As one of the world's leading manufacturers of rolling bearings, linear technology components and steering systems, we can be found on almost every continent – with production facilities, sales offices and technology centres – because our customers appreciate short decision-making channels, prompt deliveries and local service.

Partnership based on trust – and trust based on quality

Total Quality by NSK: The synergies of our global network of NSK Technology Centres. Just one example of how we meet our requirements for high quality.

NSK is one of the leading companies with a long tradition in patent applications for machine parts. In our worldwide research centres, we not only concentrate on the development of new technologies, but also on the continual improvement

of quality based on the integrated technology platform of tribology, material technology, analysis and mechatronics.

Introduction

Order codes for bearings are made up of a combination of letters and numbers. This alphanumeric combination denotes the type, size and structure of the bearing.

Within each order code, a distinction is made between the basic designation and any suffixes and/or prefixes. The basic designation indicates the bearing type and the bore size. These basic designations are defined in the German DIN 623 standard and the relevant ISO standard. For most bearing types, the basic designation is made up of numbers, but some are alphanumeric. Prefixes and suffixes denote special modifications, for example if the internal clearance or accuracy deviate from the norm. The use of prefixes and suffixes is only partially standardised. Suffixes differ the most, with the various bearing manufacturers using different codes for certain modifications. This brochure serves to explain the various bearing codes used by NSK and RHP and helps you to compare them with other manufacturers' designations.

NSK is one of the world's largest bearing manufacturers. In the early 1990s, it took over the RHP Group, UK's biggest producer of bearings. Since then, NSK has been distributing bearings using the NSK and RHP brand names. In some cases, the two brands' bearings use different supplementary designations. If no supplementary designation is listed under the NSK or RHP brand name, it means that there is no equivalent to the other brand's designation.

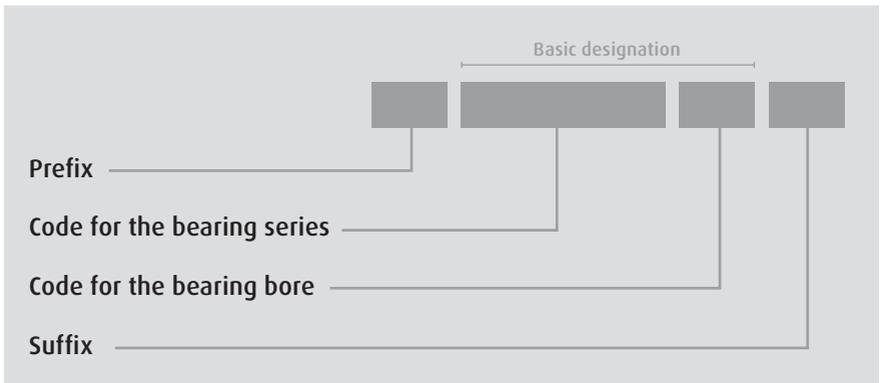

This brochure also uses . or .. in some designations. This indicates that the dot(s) can be replaced with different numbers or letters.

Table 4 (page 38) compares NSK's and RHP's supplementary designations with the codes used by a number of competitors. This table was prepared carefully based on the material available to us from the relevant competitors. However, we cannot guarantee that the information is correct.

Introduction

How the order codes for bearings are made up

The diagram below shows how the order codes are made up. There should be spaces separating the individual sections of an order code from one another.

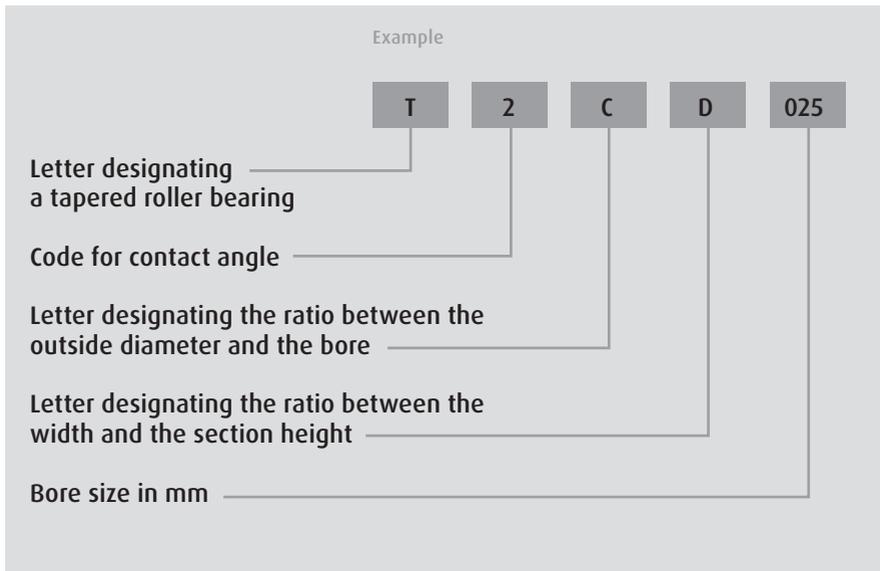

Examples:

HR 313 09 J

F 60 8 MC3

Designation of tapered roller bearings as per ISO 355

1 Basic designations

The basic designation consists of the code for the bearing series and the code for the bearing bore. The most important codes for metric bearing series are listed in table 1.1.

Table 1.1 – Basic designations at a glance

| Metric bearing series | Basic designation |
|---------------------------------|--|
| Deep-groove ball bearing | 42, 43, 60, 62, 63, 64, 68, 69, 160, 161 |
| Angular-contact ball bearing | 32, 33, 52, 53, 70, 72, 73, 78, 79 |
| Self-aligning ball bearing | 12, 13, 22, 23, 112, 113, 115 |
| Separable ball bearing | BO, E, L |
| Cylindrical roller bearing | N2, N3, N4, N22, N23 |
| NJ2 | NJ3, NJ4, NJ22, NJ23 |
| NU2 | NU3, NU4, NU22, NU23 |
| NUP2 | NUP3, NUP4, NUP22, NUP23 |
| NF2 | NF3, NF4 |
| NN | NN30, NNU49 |
| Tapered roller bearing | 302, 303, 313, 320, 322, 323, 329, 330, 331, 332 |
| Spherical roller bearing | 213, 222, 223, 230, 231, 232, 239, 240, 241 |
| Thrust ball bearing | 511, 512, 513, 514, 522, 523, 524 |
| Spherical roller thrust bearing | 292, 293, 294 |

RHP still produces deep-groove ball bearings, separable ball bearings, angular-contact ball bearings, four-point contact bearings, thrust ball bearings, cylindrical roller bearings and self-aligning bearings in imperial dimensions (inches). Please refer to our catalogue for these bearing series' codes.

1 Basic designations

1.2 Code for the bearing bore

The code for the bearing bore indicates the bearing's bore size. A two-digit number is used for bore sizes from 20 mm to 480 mm. This number is multiplied by five to give the bore size.

For example, the code 6224 stands for a deep-groove ball bearing with a bore size of 120 mm. Diameters of 10, 12, 15 and 17 mm are an exception.

In these cases, 00 indicates a diameter of 10 mm, 01 stands for 12 mm, 02 means 15 mm and the code 03 corresponds to a diameter of 17 mm.

The diameter is stated in mm for bore sizes up to 9 mm and over 480 mm. However, a deep-groove ball bearing with the code 688 MC3 has a bore size of 8 mm and a spherical roller bearing designated as 230/560 CAM E4 has a bore size of 560 mm.

The bore size is separated from the bearing series code using a slash in the case of bearings with bore sizes that cannot be divided by five, e.g. 63/22.

1 Basic designations

1.3 Letters and their different meanings

Prefixes and suffixes can have different meanings depending on the bearing series in question.

- Examples:** HR 33206 **J** Contact angle as per ISO
6204 ZZ C3E AV2S **J** Individually wrapped and boxed
- 6304 C3 **E** Low noise bearing
NJ 204 **E T** Extra capacity cylindrical roller bearing
- R** NU 207 Cylindrical roller bearing with no inner ring
R 4 ZZ Miniature bearing with imperial dimensions

1.4 Use of codes on bearings and packaging

The full bearing code – including all prefixes and suffixes – always appears on the packaging. The bearing rings themselves usually only feature the basic designation and some supplementary designations, such as radial clearance and accuracy. Information about the cage is not normally provided on the rings.

Should a replacement bearing be needed, users have to check the bearing which has been removed to see what type of cage is required. The lubricant used in sealed deep-groove ball bearings, for example, cannot be indicated on the bearing itself due to the large number of different options available.

In most cases, the basic designation is stamped or lasered onto NSK and RHP bearings, while the supplementary designation is added using a laser etch. As well as the bearing code, the rings are marked with the NSK or RHP company name, the country of manufacture and internal production codes. However, these are not placed immediately next to the type code.

2 Prefixes

Prefixes are used comparatively rarely. They serve almost exclusively to indicate individual components of complete bearings or to designate miniature bearings. The codes are listed in **table 2**.

Table 2 – Prefixes at a glance

| NSK | RHP | Definition |
|------------|----------|--|
| B | | Bearing with special dimensions, example: B 15 |
| | B | Housing insert with no eccentric ring, example: B 1030-30DEC |
| F | | Bearing with flanged outer ring, example: F 684 ZZ MC3 NS7L |
| HR | | For tapered roller bearings and deep-groove ball bearings: higher load rating, example: HR 32210 J |
| | J | Lubrication hole on the same side as the mounting screws or eccentric collar lock, example: J 1020-20G |
| MF | | Miniature metric bearing with special dimensions and flanged outer ring |
| MR | | Miniature metric bearing with special dimensions Example: MR 126 ZZ MC3 PS2S |
| R | R | Bearing outer ring with rollers and cage, no inner ring Example: R NU 207 For NU 207 cylindrical roller bearing: outer ring with roller crown and cage Instead of the prefix R, the following designation can also be used at NSK: (example) RUS . . . instead of RNU . . . |
| R | | Miniature imperial bearing, example: R 4 Z MC3 |
| -H- | | Miniature bearing made from extra corrosion-resistant steel Example: 608 -H- 20 T1X ZZ NS7 S |
| | T | Mounted unit insert with triple lip seal Example: T 1025-25G |

3 Suffixes

A large number of suffixes are used to denote structural modifications. Specifically, the suffixes provide information about the:

- › Cage Type
- › Internal design
- › Seal
- › Lubricant used
- › Tolerances
- › Internal clearance
- › External design

The suffixes are listed in **table 3** (page 20). **Table 4** (page 38) compares NSK's and RHP's most important suffixes with those used by two of their competitors.

3 Suffixes

Table 3.1 – Internal design

| | Definition |
|----------|--|
| A | <p>These codes do not have set meanings when they are used directly after the basic designation. They are used when necessary to denote modifications to the bearing's internal design. Normally, they are only used for a limited amount of time to prevent confusion during a transitional period.</p> |
| B | |
| C | |
| D | |
| E | |
| F | |

However, in some cases they are used permanently to designate bearings of the same type and dimensions which have different internal designs.

| NSK | RHP | Definition |
|------------|----------|--|
| A | A | Angular-contact ball bearing with 30° contact angle Example: 7014 A TR SUL P3 |
| A5 | E | Angular-contact ball bearing with 25° contact angle Example: 7014 A5 TR SUL P3 |
| B | B | Angular-contact ball bearing with 40° contact angle Example: 7310 B EAT85 SU CNB |
| C | C | Angular-contact ball bearing with 15° contact angle Example: 7910 C T SUL P4 |
| EA | | Spherical roller bearing with higher load rating and pressed steel cage Example: 22224 EA E4 |
| CAM | | Spherical roller bearing with floating guide ring and one-piece solid brass cage Example: 23156 CAM E4 |

| NSK | RHP | Definition |
|------|-----|--|
| C/CD | | Spherical roller bearing with floating guide ring and pressed steel cage Example: 23020 CD E4 |
| E | E | Extra capacity design Example: NU 2212 E T C3 |
| EA | EJ | Spherical roller bearing with extra capacity design and pressed steel cage Example: 22312 EJ |
| | FS | Mounted unit insert with flinger seal Example: 1035-35DECG FS |
| J | | Tapered roller bearing with contact angle as per ISO Example: HR 32215 J |
| U22 | | Spherical roller bearing with superior-quality surface finish on the raceways and rolling elements |
| U32 | | Cylindrical roller bearing with NJ and NUP design and modified shoulder design |
| U34 | | Cylindrical roller bearing for vibrational stress |
| VS | VB | Spherical roller bearing for vibrating screens, internal clearance C3 Example: 22317 CAM- VS 3 |

3 Suffixes

Table 3.2 – External dimensions, external design and materials

| NSK | RHP | Definition |
|---------|-----|--|
| E2 | W33 | For double-row cylindrical roller bearings: oil groove and lubrication holes in the outer ring (dependent on bearing size: E, E1, E2, E3, E4) Example: NN 3017 MB KR E2 CC1 P4 (This has now been replaced by E44 only) |
| E4 | W33 | For spherical roller bearings: oil groove and lubrication holes in the outer ring Example: 22230 CAM E4 |
| g | | Bearing made from case-hardening steel. If no digits are added, the rings and the set of rolling elements are made from case-hardening steel. Additional numbers indicate which parts: g2 Outer ring only g3 Inner ring only g4 Set of rolling elements only g5 Outer and inner ring g6 Outer ring and set of rolling elements g7 Inner ring and set of rolling elements Example: 22215CAGM (computer-generated documents use a capital G) |
| -H -(h) | | Bearing made from corrosion-resistant steel Example: 625- H -T12ZZ1MC3 |

| NSK | RHP | Definition |
|------------|------------|---|
| K30 | K30 | Bearing with tapered bore, taper 1:30 Example: 24030 CAM K30 E4 |
| KR | | Bearing with tapered bore but with narrower tolerance range positioned towards lower limit of ISO range (mainly for precision bearings) |
| S | | Surface protection, phosphatised Example: RS-5012D5E7NA S5 C3 |
| U | | Thrust ball bearing with spherical housing washer and seat washer Example: 53210 U |
| X | | Bearing whose external dimensions have been changed to comply with international standards Example: 51226 X |
| /.. | /.. | For bearings with a bore size that cannot be divided by five or is larger than 480 mm: bore size Example: 63/ 22 or 230/ 560 |

3 Suffixes

Table 3.3 – Seal and snap ring groove

The following suffixes are only used in conjunction with ball bearings.

| NSK | RHP | Definition |
|-------------|---------------------------|--|
| D | RSR | Bearing with seal on one side (only for bores < 10 mm on NSK bearings and bores < 20 mm on RHP bearings) Example: 608 D MC3 NS7L |
| DD | -2RSR | Bearing with seal on both sides (only for bores < 10 mm on NSK bearings and bores < 20 mm on RHP bearings) Example: 608 DD MC3 PS2S |
| DDU | -2RS | Bearing with seal on both sides, example: 6208 DDU CM AS2S |
| DU | RS | Bearing with seal on one side, example: 6208 DU C3E |
| DUN | RSN | Bearing with seal on one side and snap ring groove on the opposite side Example: 6207 DUN |
| DUNR | RSNR | Bearing with seal on one side and snap ring groove with snap ring on the opposite side, example: 6310 DUNR C3 AV2S |
| N | N | Bearing with snap ring groove in the outer ring, example: 6208 N |
| NDU | | Bearing with seal on one side and snap ring groove on the same side Example: 6204 NDU |
| NR | NR | Bearing with snap ring groove in the outer ring and snap ring Example: 6208 NR |
| NRDU | | Bearing with seal on one side and snap ring groove with snap ring on the same side Example: 6205 NRDU |
| NRZ | | Bearing with shield on one side and snap ring groove with snap ring on the same side, example: 6208 NRZ |
| NZ | RSZN ZNB | Bearing with shield on one side and snap ring groove on the same side Example: 6208 NZ |

| NSK | RHP | Definition |
|-------------|------------|--|
| RSR | | For double-row angular-contact ball bearings: bearing with contact seal and no groove in the inner ring Example: 3302 B- RSR TNG |
| V | | Bearing with non-contact seals on one side, example: 6208 V |
| VV | | Bearing with non-contact seals on both sides, example: 6208 VV CM N575 |
| Z | Z | Bearing with shield on one side, example: 6208 Z |
| ZN | ZN | Bearing with shield on one side and snap ring groove on the opposite side Example: 6206 ZN |
| ZNR | ZNR | Bearing with shield on one side and snap ring groove with snap ring on the opposite side, example: 6202 ZNR |
| ZR | ZR | For double-row angular-contact ball bearings: bearing with shield and no groove in the inner ring Example: 3205 B ZR TNG |
| ZS | | Bearing with removable shield on one side, example: 6326 ZS |
| ZZ | -ZZ | Bearing with shields on both sides, example: 6208 ZZ C3E BQHS |
| ZZS | | Bearing with removable shields on both sides Example: 6326 ZZS C3 AS2S |
| 2RS | | Self-aligning ball bearing with contact seals on both sides (only for bearings in the 22.. and 23.. series), example: 2208- 2RS TNG AR3N |
| 2RSR | | Bearing with contact seals on both sides in the case of double-row angular-contact ball bearings with no groove in the inner ring, example: 3207B- 2RSR TNG YRLN |
| 2ZR | | Bearing with shields on both sides in the case of double-row angular-contact ball bearings with no groove in the inner ring Example: 3211 B- 2ZR TNG AR3N The codes for seals may also include numbers for special materials; 8 = acrylate Example: 6205 DDU 8 C3E ENSS Combinations of Z, V and DU may also be used Example: 6006 VDU |

3 Suffixes

Table 3.4 - Cage type

The supplementary designation for the cage type is usually added on the end of the basic designation if the bearing does not feature the cage used as standard for the respective kind of bearing.

| NSK | RHP | Definition |
|-----|-----|--|
| | J | Pressed steel cage Example: 2206 EJ W33 |
| M | MA | Solid brass cage guided by the outer ring Example: 6318 M |
| MA1 | | Solid brass window-type cage Example: NJ 326 MA1 |
| | MB | Solid brass cage guided by the inner ring Example: 22319 MB W33 +11 |
| MBR | | Solid brass cage guided by the rolling elements, riveted Example: NJ 312 MBR |
| MR | | Solid brass cage guided by the rolling elements Example: NU 232 MR |
| T.. | | Polymer cage, standard material. Polyamide 66 polymeric cage reinforced with glass fibre designs and materials designated by numbers and letters. Example: NU 208E T; 6001 T1X |
| T | | Inner ring guided laminated phenolic resin cage for precision deep groove ball bearing. Example 6205 T |
| T1X | | Inner ring guided laminated phenolic resin cage for precision deep groove ball bearing. Example 6205 T1X |
| TR | | Outer ring guided laminated phenolic resin cage for precision angular contact bearings. Example 80BNR 10 ST SULP4 Precision Robust series. Example 7013 C TR DBLP4 Precision Standard series |
| TR | TR | Laminated phenolic resin for spindle bearings Example: 7910 A5 T SUL P4 |
| T85 | | Polyamide 46 cage reinforced with glass fibre Example: 7208B EA T85 SU CNB |

| NSK | RHP | Definition |
|-----|-----|---|
| TNG | TN | Snap cage made from glass fibre reinforced polyamide 66 Example: 2204 E TNG |
| TY | | Polymer cage made from polyamide 66 glass fibre reinforcement for spindle bearings. This generally superseded by TYN |
| TYN | | Polymer cage made from polyamide 4.6 with glass fibre reinforcement for spindle bearings Example: 7010 C TYN SUL P3 |
| V | V | Full complement ball bearing, or roller bearing Example: NCF 3022 V |
| W | J | For cylindrical roller bearings and angular-contact ball bearings: pressed steel cage Example: NU204 W , 7206B W G |
| Y | Y | Pressed brass cage Example: 6006 Y |

Table 3.4.1 – bearing design and cage type for spherical roller bearings

| NSK | RHP | Definition |
|------|-----|---|
| C/CD | | Floating guide ring, pressed steel cage |
| CAM | | Floating guide ring, solid brass cage |
| | EJ | Extra capacity design with pressed steel cage |
| | EVB | Extra capacity design with solid brass cage |

3 Suffixes

Table 3.5 – Matched bearings

A letter (L, M or H) is added to the codes marked with * to indicate the preload class. The same principle applies to SUL, SUM and SUH. For details of the special characters for internal clearance and preload, refer to 3.6 ‘Internal clearance’.

| NSK | RHP | Definition | Arrangement |
|-------------------------|--------------|--|-------------|
| BG BWG | BETNU | Angular-contact ball bearing with 40° contact angle for installation as a pair in a face-to-face, back-to-back or tandem configuration. Axial clearance in the case of face-to-face or back-to-back arrangements (W: see 3.4 ‘Cage type’), example: 7210 BG , 7206 BWG | |
| DB* | DB* | Pair of bearings in a back-to-back configuration, example: 7210C TYN DB L P4 | ∅∅ |
| DBB* | QB* | Quadruplex set of bearings in a back-to-back configuration Example: 7214 A5 TYN DBBL P4 +KL14 | ∅∅∅∅ |
| DBD* | 2TB* | Triplex set of bearings in a combined tandem/back-to-back configuration Example: 7012 A5 DBDM P4 +KL12 | ∅∅∅ |
| DBT* | 3TB* | Quadruplex set of bearings in a combined tandem/back-to-back configuration Example: 7210 A5 TYN DBTM P4 +KLB | ∅∅∅∅ |
| DF* | DF* | Pair of bearings in a face-to-face configuration, example: HR 31309 J DF +KR CA72 | ∅∅ |
| DFD* | 2TF* | Triplex set of bearings in a combined tandem/face-to-face configuration Example: 7310 B A5 DFD CA13 | ∅∅∅ |
| DFF* | QF* | Quadruplex set of bearings in a face-to-face configuration Example: 7916 C TYN DFFL P4 +KL18 | ∅∅∅∅ |
| DFT* | 3TF | Quadruplex set of bearings in a combined tandem/face-to-face configuration Example: 7014 C TYN DFT LP4 +KL12 | ∅∅∅∅ |
| DR | D | Two bearings matched for even absorption of radial loads, example: NU 208 EM C3 DR | |
| DT | DT | Pair of bearings in a tandem configuration, example: 7210 A TYN DT P2 | ∅∅ |
| DTD | 3T | Triplex set of bearings in a tandem configuration, example: 7008 C TYN DTD P4 | ∅∅∅ |
| DTT | 4T | Quadruplex set of bearings in a tandem configuration, example: 7013 A5 TYN DTT P4 | ∅∅∅∅ |

| NSK | RHP | Definition |
|-----------------|------------|---|
| DUD | 3U | Set of spindle bearings consisting of 3 universal bearings |
| QU | 4U | Set of spindle bearings consisting of 4 universal bearings |
| DUH | DUH | Pair of spindle bearings for installation in any face-to-face, back-to-back or tandem configuration. Heavy preload in the case of face-to-face and back-to-back arrangements, example: 7214 CTYN DUH P4 |
| DUL | DUL | Pair of spindle bearings for installation in any face-to-face, back-to-back or tandem configuration. Light preload in the case of face-to-face and back-to-back arrangements, example: 7905 A5 TYN DUL P4 |
| DUM | DUM | Pair of spindle bearings for installation in any face-to-face, back-to-back or tandem configuration. Medium preload in the case of face-to-face and back-to-back arrangements, example: 7212 A5 TYN DUM P4 |
| SUH | SUH | Universal spindle bearing for multiplex bearing sets with any number of bearings. Heavy preload in the case of face-to-face and back-to-back arrangements, example: 7214 A5 TYN SUH P4 |
| SUL | SUL | Universal spindle bearing for multiplex bearing sets with any number of bearings. Light preload in the case of face-to-face and back-to-back arrangements, example: 7908 A5 TR SUL P4 |
| SUM | SUM | Universal spindle bearing for multiplex bearing sets with any number of bearings. Medium preload in the case of face-to-face and back-to-back arrangements, example: 7004 C TR SUM P4 |
| +KL(R).. | | Set of bearings with annular spacers between the outer and inner rings. The subsequent number indicates the width of the rings, example: 7918 A TYN DBD P4 + KL10 |
| +KR | | HR31316DB + KLR10 Set of bearings with annular spacer between the outer rings Example: HR31309 JDF + KR CA90 |

3 Suffixes

Table 3.6 – Internal clearance

C0 (or CN) denotes normal internal clearance and is not marked on the bearings themselves or on the packaging.

| NSK | RHP | Definition |
|-------------|------------|--|
| C1 | | Internal clearance less than C2 Example: NNU 4924 MB KR E44 CC1 P4 |
| C2 | C2 | Internal clearance less than normal Example: 6308 C2 |
| C3 | C3 | Internal clearance greater than normal Example: 22212 CAM C3 |
| C4 | C4 | Internal clearance greater than C3 Example: 22232 CAM C4 |
| C5 | C5 | Internal clearance greater than C4 Example: NU 2228 EM C5 |
| CA.. | A.. | Special axial clearance; the figures indicate the mean value of the clearance class in µm Example: HR 31307J DF +KR CA73 |
| CC. | | Radial clearance for cylindrical roller bearings with non-interchangeable bearing components. The subsequent number indicates the clearance class (no number for normal clearance), example: NU 210E T7 CC3 |
| CE | | Radial clearance in the middle of the 'normal' class, low noise Example: 6007 CE |

| NSK | RHP | Definition |
|-------------|------------|---|
| CG.. | R.. | Special radial clearance; the figures indicate the mean value of the clearance class in μm Example: 6203 T1X DDU CG14E |
| CM | | Radial clearance for deep-groove ball bearings with reduced radial clearance range within the 'normal' clearance class, low noise Example: 6212 CM |
| | | Radial clearance for cylindrical roller bearings with reduced radial clearance range within the 'normal' clearance class, non interchangeable rings Example: NU 214 CM |
| CP.. | G.. | Pair of bearings with special preload; the figures indicate the mean value of the preload in μm Example: 7212 B W DB CP5 |
| CT | | Radial clearance for cylindrical roller bearings with reduced radial clearance range within the 'normal' clearance class, low noise, interchangeable rings, example: NU 208 ET7 CT |

3 Suffixes

Table 3.7 – Internal clearance for deep-groove ball bearings with a bore size of less than 10 mm (miniature bearings)

| NSK | RHP | Definition |
|-----|-----|--|
| MC1 | | Radial clearance less than MC2 Example: 624 MC1 |
| MC2 | | Radial clearance less than MC3 Example: 623 MC2 |
| MC3 | | Radial clearance corresponds to a reduced normal clearance tolerance as per ISO5753 Example: 686 MC3 |
| MC4 | | Radial clearance greater than MC3 Example: 625 DD MC4 E PS2S 6 |
| MC5 | | Radial clearance greater than MC4 Example: 606 ZZ MC5 E NS7LK |
| MC6 | | Radial clearance greater than MC5 Example: 626 T1X DD MC6 E NS7S J |

Contrary to the radial clearance stipulations of ISO 5753 (see 4 ‘Suffixes: a comparison between NSK/RHP and two competitors’ codes’), NSK produces deep-groove ball bearings with a bore size of less than 10 mm to smaller tolerance ranges than those defined in the above-mentioned standard. MC3 radial clearance corresponds to reduced normal clearance as per ISO 5753. The radial clearance class of NSK miniature bearings is always indicated.

Table 3.8 – Noise-tested bearings

| NSK | RHP | Definition |
|-----|-----|---|
| CM | | Low noise specification for deep-groove ball bearings and cylindrical roller bearings including reduced radial clearance tolerance; non-interchangeable rings in the case of cylindrical roller bearings Example: 6214 CM |
| CT | | Low noise specification for cylindrical roller bearings including reduced radial clearance tolerance; interchangeable rings Example: NU 312 E T CT |
| E | | Low noise bearing (used straight after the radial clearance code) Example: 6303 C3 E, 608 MC2 E |
| ER | | Low noise bearing; tougher requirements than E, CM and CT Example: 625 ZZ1 CM3 ER P5 PS2L |
| EF | | Low noise bearing; even tougher requirements than ER Example: 624 ZZ1 MC3 EF P4 NS7L |

3 Suffixes

Table 3.9 – Dimensional, geometrical and running accuracy

Normal tolerance (P0) is not marked on the bearing or on the packaging.

| NSK | RHP | Definition |
|------|------|--|
| P2 | P2 | P2 tolerance class as per ISO 492 Example: 7002 C TR SUL P2 |
| P2A | 0 | P2A Special tolerance for Precision Angular contact thrust bearings - P2 tolerance except outside diameter |
| P3 | P3 | External tolerance as per P4 tolerance class, running accuracy as per P2 tolerance class Example: 7000 C TR SUL P3 |
| P4 | P4 | P4 tolerance class as per ISO 492 Example: 7209 A5 TR SUL P4 |
| P4A | P4A | P4A Special tolerance for Precision Angular contact thrust bearings - P4 tolerance expect outside diameter. |
| P5 | P5 | P5 tolerance class as per ISO 492 Example: 7206 B P5 |
| P6 | P6 | P6 tolerance class as per ISO 492 Example: 6205 P6 |
| PA5 | P5 | Tolerance class as per ABEC 5 Example: 7010 C TR DBL PA5 |
| PA7 | P4 | Tolerance class as per ABEC 7 Example: 7213 A5 TR PA7 |
| PA9 | P2 | Tolerance class as per ABEC 9 Example: 7211 C TR PA9 |
| PN7A | P4 | Accuracy class as per NSK factory standard Example: 30TAC62BDBC10 PN7A AS2S 5 |
| PN7B | PN7B | PN7B Special accuracy, bore and outside diameter exclusive to NSK for SU arrangements only |

Table 3.10 – Heat treatment

Normal heat stabilisation for operating temperatures of up to 120°C is not marked on the bearing or the packaging.

| NSK | RHP | Definition |
|-----|-----|---|
| S11 | S1 | Thermally stabilised for operating temperatures up to 200°C Only used for spherical roller bearings Example: 23036 CAM E4 C3 S11 |
| X26 | S0 | Thermally stabilised for operating temperatures up to 150°C Example: 6304 C4 X26 |
| X28 | S1 | Thermally stabilised for operating temperatures up to 200°C Example: NU 210 C3 X28 |
| X29 | S2 | Thermally stabilised for operating temperatures up to 250°C Example: NU 2236 M C4 X29 |

3 Suffixes

Table 3.11 – Lubricants

Deep-groove ball bearings with seals or shields on both sides are supplied with a grease charge. The type and amount of grease varies depending on the operating conditions and bearing series.

Table 3.11.1 – Common bearing greases

| NSK code | Lubricant name |
|----------|-------------------------------|
| A22 | SHELL Aeroshell 22 |
| A72 | KLÜBER Asonic GHY72 |
| AS2 | SHELL Alvania S2 |
| ASM | KLÜBER Asonic GLY32 |
| BQH | KLÜBER Klueberquiet BQH72-102 |
| D8S | KLÜBER Isoflex Super LS18 |
| EA3 | NSK Grease EA3 |
| EA5 | NSK Grease EA5 |
| EA6 | NSK Grease EA6 |
| EA7 | NSK Grease EA7 |
| EEM | EXXON-MOBIL Polyrex EM |
| ENS | NSK Grease ENS |
| NS7 | KYODO YUSHI Multemp SRL |
| NSC | NSK Grease NSC |
| PS2 | KYODO YUSHI Multemp PS2 |
| ST3 | RHENUS Norlith STM3 |
| TML | LUBCON Thermoplex 2TML |
| TN5 | KLÜBER Isofelx Topas NB52 |

Table 3.11.2 – Amount of grease

The details provided here are mean values, which depend on the size and structure of the bearing (open, sealed on one side or sealed on both sides). The amount of grease used depends on the specific operating conditions. The codes for the type and amount of grease are written together at the end of the bearing designation.

Example: 6203 DDU C3E AS2S

| NSK code | Filling amount (range in % of the bearing free space) |
|----------|---|
| K | Approx. 20% |
| L | Approx. 20% to 30% |
| S | Approx. 30% to 55% (standard NSK filling) |
| M | Approx. 55% to 70% |
| F | Approx. 85% to 90% |

4 Suffixes: Comparison of codes

Table 4

| NSK | RHP | Explanation | Example | SKF* | FAG* |
|-------------------|--------------|---|-------------------------|--------------|-----------|
| A | A | Angular-contact ball bearing with contact angle of 30° | 7014 A | A | |
| | A | Mounted unit insert fitted with set screw lock insert with flush inner ring on one side | SL 40 A | | |
| A5 | E | Angular-contact ball bearing with contact angle of 25° | 7208 A5 | ACD | E |
| B | B | Angular-contact ball bearing with contact angle of 40° | 7210 B | B | B |
| B | | Bearing with special dimensions | B 15 | | |
| B | B | Double-row angular-contact ball bearing with contact angle of 25° | 3208 B | B | B |
| BG BWG | BETNU | Universal angular-contact ball bearing, contact angle 40° | 7210 BG | BG, B(E)C | BUA |
| C | C | Angular-contact ball bearing with contact angle of 15° | 7010 C | CD | C |
| C, CD | | Spherical roller bearing with floating guide ring and pressed steel cage | 22218 CD | C, CC, EC | |
| C0 | CN | Normal radial clearance, not marked | | | CN (C0) |
| C1 | C1 | Radial clearance less than C2 | 6205 C1 | C1 | C1 |
| C2 | C2 | Radial clearance less than normal | 6310 C2 | C2 | C2 |
| C3 | C3 | Radial clearance greater than normal | NU 312 C3 | C3 | C3 |
| C4 | C4 | Radial clearance greater than C3 | 2214 C4 | C4 | C4 |
| C5 | C5 | Radial clearance greater than C4 | 23156M C5 | C5 | C5 |
| | CA | Normal radial clearance for roller bearings with interchangeable rings marked 'CA' | NU210 JCA | | |
| CA.. | A.. | Special axial clearance; axial clearance is stated in µm | HR30311DJD +KCRCA140 | C.. | A.., VA.. |
| CC | | Normal radial clearance, non-interchangeable rings | NN3018 CC | | CNA |

| NSK | RHP | Explanation | Example | SKF* | FAG* |
|-------|-------|--|--------------------|----------|------|
| CC. | | Non-interchangeable rings; radial clearance class C (see C1 to C5) | N2215 CC1 | | C.NA |
| CCG.. | | Special radial clearance, non-interchangeable bearing rings | NU212 M CCG52 E | | |
| CE | | Radial clearance 'normal' class, low noise | 6007 CE | CNM, QE6 | |
| CG.. | R.. | Special radial clearance | 6210 CG50 | C.. | R.. |
| CP.. | G.. | Special axial preload; the subsequent number is the mean axial clearance in μm | 7210 CP5 | | |
| CX.. | | Spherical roller bearing with modified cage design (e.g. fewer rollers per row) | 24122 CX G5.. | | |
| CM | | Deep-groove ball bearing or cylindrical roller bearing for electric motors with reduced radial clearance and low noise | 6004 CM | QE6 | |
| D | RSR | Deep-groove ball bearing with $d < 10$ mm and contact seal on one side | 608 D | RS1 | RSR |
| DB* | DB* | Pair of bearings in a back-to-back arrangement | 7305 B DB | DB | DB |
| DD | -2RSR | Deep-groove ball bearing with $d < 10$ mm and contact seal on both sides | 626 DD | 2RS1 | 2RSR |
| | DEC | Mounted unit insert with eccentric locking collar, inner ring extended on both sides | 1135-35DEC | A | |
| DF* | DF* | Pair of bearings in a face-to-face configuration | 31310 J DF | DF | DF |
| DT | DT | Pair of bearings in a tandem configuration | 7224B DT | DT | DT |
| DR | | Two matched bearings for even absorption of radial loads | NU312 DR | DR | K12 |
| DU | RS | Deep-groove ball bearing with contact seal on one side | 6010 DU | RS1 | RSR |

4 Suffixes: Comparison of codes

| NSK | RHP | Explanation | Example | SKF* | FAG* |
|-------------|-------------|---|------------|-------|-----------|
| DU | DU | Two universal angular-contact ball bearings as a set | | | |
| DUN | RSN | Deep-groove ball bearing with snap ring groove on one side and contact seal on the opposite side | 6209 DUN | RSN | RSRN |
| DUNR | RSNR | Like DUN but with additional snap ring | 6008 DUNR | RSNR | RSRNR |
| E | E | Extra capacity design | NU213 E | E | E |
| E | | Low noise bearing (used straight after the radial clearance code) | 6000 C3E | QE6 | |
| E4 | W33 | Spherical roller bearing with oil groove and lubrication holes | 22214EA E4 | W33 | S |
| | EC | Mounted unit insert with eccentric locking collar, inner ring widened on one side | 1345-45EC | | |
| | EJ | Spherical roller bearing with extra capacity design and pressed steel cage | 22308 EJ | EC, E | HL |
| | EP1 | Imperial bearing as per ABEC1 tolerances | XLJ1½ EP1 | | |
| | EVM | Bearing with higher load rating and solid brass cage, guided by the rolling elements in the case of cylindrical roller bearings | NU208 EVM | ECM | E.M1 (M2) |
| | FS | For mounted units: bearing unit with two flinger seals | SL50 FS | 2F | |
| g | | Bearing made from case-hardened steel | HR31310J g | HA.. | Z16 |
| G | U | Universal angular-contact ball bearing for use in face-to-face, back-to-back or tandem configurations | 7311 BG | G | U |

| NSK | RHP | Example | Example | SKF* | FAG* |
|---------------|---------------|---|-----------------|------------|------------|
| | G | Mounted unit insert with relubrication facility | 1240-40 G | | |
| -H-(h) | | Bearing made from corrosion-resistant steel | 6003 -H- | W | Z15 Z20 |
| H | H | Pair of angular-contact ball bearings with heavy preload; code always used after the suffix for the pair | 7008 CTR DUH | C | H |
| J | | For tapered roller bearings only: contact angle as per ISO | HR30312J | | |
| K | K | Tapered bore (taper 1:12) | 1205 K | K | K |
| K30 | K30 | Tapered bore (taper 1:30) | 24136M K30 | K30 | K30 |
| L | L | Pair of angular-contact ball bearings with light axial preload; code always used after the suffix for the pair | 7206 CTR DUL | A | L |
| | LOC | Bearing with reduced outside diameter | QJ 214 LOC MB | | |
| M | M | Pair of angular-contact ball bearings with medium axial preload; code always used after the suffix for the pair | 7206 CTR DUM | B | M |
| M | MA, MB | Solid brass cage, rib-guided | NU212 M | MA (MB) | MA (MB) |
| MA1 | MA | Solid brass window-type cage | NU226 MA1 | MP | MP |
| MB | MA | Solid brass cage, outer ring rib-guided | NU232 MB | MA6 | M1A |
| | MB | Solid brass cage, guided by the inner ring | 22209 MB | MB | MB |

4 Suffixes: Comparison of codes

| NSK | RHP | Example | Example | SKF* | FAG* |
|-------------|-----------------|--|-----------|--------|-------|
| MBR | | Solid brass cage, guided by the rolling elements | NJ326 MBR | M6 | M1 |
| MC2 | | Radial clearance less than MC3 (miniature bearings only) | 608DDMC2E | | |
| MC3 | | Radial clearance corresponds to reduced normal clearance tolerance as per ISO 5753 (miniature bearings only) | 626 MC3 E | | |
| MC4 | | Radial clearance greater than MC3 (miniature bearings only) | 625ZZMC4E | CNH | |
| MC5 | | Radial clearance greater than MC4 (miniature bearings only) | 607MC5E | | |
| MC6 | | Radial clearance greater than MC5 (miniature bearings only) | 625MC6E | | |
| MR | M | Solid brass cage, guided by the rolling elements | 6236 MR | M | M |
| N | N | Bearing with snap ring groove in the outer ring of the bearing | 6210 N | N | N |
| NDU | RSNB | Deep-groove ball bearing with contact seal on one side and snap ring groove on the same side | 6206 NDU | RS1NB | RSRNB |
| NR | NR | Deep-groove ball bearing with snap ring groove and snap ring | NU210 NR | NR | NR |
| NRDU | RSNBR | Like NDU but with snap ring | 6307 NRDU | RS1NMR | RSRNB |
| NRZ | ZNBR | Deep-groove ball bearing with shield on one side and snap ring groove with snap ring on the same side | 6210 NRZ | ZNBR | ZRNBR |
| NZ | RSZN ZNB | Like NRZ but without snap ring | 6212 NZ | ZNB | ZRNB |

| NSK | RHP | Explanation | Example | SKF* | FAG* |
|------|-----|--|-----------------------|------|------|
| P2 | P2 | Accuracy higher than P4 | NN3026 P2 | P2 | P2 |
| P4 | P4 | Accuracy higher than P5 | 6010 P4 | P4 | P4 |
| P5 | P5 | Accuracy higher than P6 | NU210 P5 | P5 | P5 |
| P6 | P6 | Accuracy higher than normal | NJ204 P6 | P6 | P6 |
| P6C3 | | Accuracy P6, radial clearance C3 | 6209 P6C3 | P63 | P63 |
| PA5 | P5 | Accuracy as per AFBMA 5 | 7010C PA5 | PA5 | T5 |
| PA7 | P4 | Accuracy as per AFBMA 7 | 7913C PA7 | PA7 | T7 |
| PA9 | P2 | Accuracy as per AFBMA 9 | 7218C PA9 | PA9 | T9 |
| PN7 | P3 | Accuracy class for 'TAC' bearings as per NSK standard | 30TAC62ADBC10 PN7A | P4A | P4S |
| | Q.. | Special feature: .. denotes the specification number | | | |
| RSR | RSR | Bearing with contact seal, no groove in the inner ring | 3302B- RSR-TNG | -LS | RSR |
| S | | Surface protection – either phosphatised or coated with MoS ₂ | H2315X S | W11 | |
| | S | Paired angular-contact ball bearings with standard axial clearance; code always used after the suffix for the pair | 7206 DUS | CB | UA |
| S11 | S1 | Spherical roller bearings for operating temperatures up to 200°C | 23126M S11 | | |
| SUH | SUH | Universal precision bearing, heavy preload | 7918CT RSUH | GC | US |
| SUL | SUL | Universal precision bearing, light preload | 7032CT RSUL | GA | UL |
| SUM | SUM | Universal precision bearing, medium preload | 7236CT RSUM | GB | UM |

4 Suffixes: Comparison of codes

| NSK | RHP | Explanation | Example | SKF* | FAG* |
|------------|------------|---|----------------------|------------|------|
| T.. | T.. | Polymer cage (additional supplementary designations may be used; see e.g. TY) | NU2208ET | T.. | T.. |
| | TB | Laminated Phenolic resin cage, guided by the inner ring | 7208 BETB | | TB |
| | TN | Polyamide cage, guided by the rolling elements | 7208 BETN | P | TVP |
| TNG | TNH | Polyamide cage, guided by the rolling elements | 2209E.TNG | TH | TVH |
| TY | TNB | Polyamide cage, guided by the inner ring | 7207C TYNB SUL P4 | TB | |
| U | | Deep-groove ball bearing with sealing grooves | 6206 UC3E | | |
| U | | Thrust ball bearing with spherical housing washer and seat washer | 51106 U | U | U |
| V | | Non-contact seal on one side | 6908 V | RZ | RSD |
| V | V | Full complement roller bearing | NCF 3022 V | V | V |
| VS | EVB | Spherical roller bearing, vibrating screen design | 22320 M E4 C4 VS | A15, VA405 | T41A |
| VV | | Non-contact seals on both sides | 6006 VV | 2RZ | 2RSD |
| W | J | Pressed steel cage, one-piece | NJ 204 W | J | J |
| X | | For thrust ball bearings: the outside diameter of the shaft washer is smaller than that of the housing washer | 51417X | | |
| X | | External dimensions in line with ISO | HR32010 XJ | X | X |
| | X | Angular-contact ball bearing for installation as a pair, without clearance | 7205BETNUX | A | O |

| NSK | RHP | Explanation | Example | SKF* | FAG* |
|-------------|-------------|--|----------------|------|--------|
| X26 | S0 | Heat treatment for use at temperatures up to 150°C | 6010C4 X26 | S0 | S0 |
| X28 | S1 | Heat treatment for use at temperatures up to 200°C | N222C5 X28 | S1 | S1 |
| X29 | S2 | Heat treatment for use at temperatures up to 250°C | N336C5 X29 | S2 | S2 |
| Z | Z | Deep-groove ball bearing with single shield | 6002 Z | Z | ZR |
| ZDU | RSZ | Bearing with sealing and shield | 6211 ZDU | RS1Z | RSR.ZR |
| ZN | ZN | Deep-groove ball bearing with shield and snap ring groove on the opposite side to the shield | 6309 ZN | ZN | ZRN |
| ZNR | ZNR | As ZN but with snap rings | 6212 ZNR | ZNR | ZRNR |
| ZR | ZR | Bearing with shield, no groove in the inner ring | 6204 ZR | Z | ZR |
| ZS | | Removable shield on one side | | | |
| ZZ | -ZZ | Deep-groove ball bearing with shields on both sides | 6207 ZZ | ZZ | ZZR |
| ZZS | | Deep-groove ball bearing with removable shields on both sides | | | |
| 2RSR | | Bearing with two contact seals, no groove in the inner ring | 3207B-2RSR-TNG | 2LS | 2RSR |
| 2ZR | -2ZR | Bearing with two shields, no groove in the inner ring | 3308B -2ZR | ZZ | ZZR |

All of the supplementary designations used by NSK and RHP which are listed in this table are explained in greater detail in **tables 2** (page 17) and **3** (page 22).
